Datastrip Handheld Reader Selected as Mobile Solution to Integrate with Tyco International's Software House® Access Control System

EXTON, Pa. (October 21, 2008) — Datastrip Inc., a world-leading provider of field-proven mobile identification and verification technology, has been selected by Tyco International's Software House® to create a mobile solution for the C•CURE® 9000 security and event management system. The new C•CURE Mobile integrates Datastrip's DSVII®-SC handheld biometric terminal with C•CURE 9000 to expand access control boundaries beyond a facility's wired infrastructure.

Datastrip's DSVII-SC provides C•CURE 9000 with a wireless reader that doesn't need to be tethered to a system to create entry portals anywhere they are required, in a building or at an event. This includes entry points separated from the access control door controller, server or workstation. The DSVII-SC reads access control card formats, including MIFARE, HID Proximity Access Control cards and HID iCLASS cards.

“By integrating Datastrip's DSVII-SC handheld device with the C•CURE 9000 SDK, we can offer unparalleled flexibility in our access control system design and implementation,” said Peter Boriskin, vice president of research and development for Tyco International's access control solutions. “With the DSVII-SC, we can now solve ID validation challenges at any temporary or remote checkpoint or access point.”

C•CURE Mobile can ensure security and ID management in the following scenarios:

- Recording employees/visitors as “in” or “out” of a facility during emergency evacuations
- Auditing the IDs of riders using employee shuttle buses
- Recording attendance of off-site meetings.

About Tyco International's Software House®

Tyco International's Software House technologies include the innovative C•CURE 9000 security and event management system and the flagship C•CURE 800/8000 access control solution.

Combined with a suite of powerful door controllers and the industry's first true multi-technology reader, Software House technologies are among the most powerful in the industry. In fact, nearly half of the companies listed on the Fortune 500 use Software House branded solutions to help solve their most complex business operation challenges.

About Datastrip Inc.

Datastrip is a world leader in field-proven mobile identity verification. Together with market-leading biometric and information technology vendors, Datastrip specializes in providing secure portable information and ID solutions that provide on-the-spot verification of credentials from any individual. The Datastrip product line supports biometric fingerprint matching, as well as contact-based and contactless ID cards such as national ID cards and passports. For more information, visit www.datastrip.com or call (800) 548-2517.
