Datastrip White Paper on TWIC/PIV Compliance Helps Integrators and End Users

Wayne, Pa. (December 2, 2008) — The move to the Transportation Worker Identification Credential (TWIC) program and the government's Personal Identity Verification (PIV) cards presents one of the greatest security challenges today. With compliance deadlines looming, U.S. port authorities, government entities and businesses need to understand the new security landscape, their rights and responsibilities. To help meet this challenge, Datastrip Inc. has issued a new white paper titled, "Coping and Compliance: Options for Integrators and End Users to Meet TWIC and PIV Integration Goals."

The white paper explains this paradigm shift in security implementation and provides a view into technologies and means for gaining compliance. It breaks down key pieces of legislation and offers suggestions for managing change.

"Compliance deadlines for these programs are just around the corner, and they're not going to go away," said Joe Delaney, Datastrip's vice president of sales and marketing. "Knowledge in the marketplace benefits everyone. It makes security solution buyers more comfortable with this complex issue and will help them make solid decisions."

The white paper is free and available for download from Datastrip's Web site at www.datastrip.com/articles.html.

About Datastrip

Datastrip is a world leader in field-proven mobile identity verification. Together with market-leading biometric and information technology vendors, Datastrip specializes in providing secure portable information and ID solutions that provide on-the-spot verification of credentials from any individual. The Datastrip product line supports facial, iris and fingerprint biometric matching, as well as contact-based and contactless ID cards such as national ID cards and passports. For more information, visit www.datastrip.com or call (800) 548-2517.
